

SWOT

Name: Jawad Munir

Strength

I was born in Pakistan and was admitted for Electrical and Computer Engineering in the top institute of Pakistan after scoring the top 135 position in the national level university Entrance exam.

After studying there for one year from 2007-2008, I was selected on Merit scholarship to study in Politecnico Di Torino, Italy in the field of BS Electronics and Computer Engineering. After finishing my studies I was working as a Junior java developer in E-Business company in Biella, Italy. And currently I am part of EIT ICT labs student masters program.

I have a lot of international experience, with friends and connections all over the world. Throughout my academic career I had been an outstanding student with fully utilizing every opportunity to gain knowledge and enhance my skills. I have ability to learn fast and effectively. I was also appreciated at my Job to think out-of-box and approach complex problems in a systematic way. During my role as a project leader I realized that 'leader is held responsible for the failure/success'.

I also have diverse expertise in different fields. I am not purely computer scientist/network administrator but have a background in electronics, electromagnetic theories for waves phenomena, signal processing and strong background in Math.

I love to do innovative things, be a part of great team and make amazing applications or products. I believe collective work always more productive than individual efforts.

Weakness

I have weakness such as to cope with very hard deadlines, which in my opinion reduce the productivity. I was told by my employer that I am at certain times not listening to the client and have low presentation skills. I have less business skills.

Opportunities

With my strengths I see myself to be adaptable to every kind of environment and culture. And learn and be innovative. My diverse background give me the opportunity to be part of every team or project.

Threats

I see myself a guy that is not made to do great presentations, but I am do working on that, and its improving. Apart from that I see that having financial understanding helps a lot in designing a product, so I see I need to improve in financial management sector.
