Strengths

My strengths are that I'm hardworking, sincere in my work and responsibilities, a good team worker and communicator. People find me as a determined person who works hard to achieve her targets. I worked hard to manage a scholarship for studying in Sweden. I encountered failures in doing so but my determination brought me here finally. I would also like to mention that honesty is a quality and also a strength which I possess that sets me apart from others.

Weaknesses

I don't have much practice in programming/coding which is sometimes necessary for the course works. I am not a good speaker and presenter. I sometimes fail to present my understanding in words even though I have fully grasped the concept. People think I cannot take quick decisions and move on with a choice. I also think I require more practical experiences gained from real world jobs and telecommunication laboratories.

Opportunities

Through this course, I'll get to learn about all the necessary steps from designing a product to marketing it. I'll learn about both advanced emerging technologies and associated market and business development. I'll get the opportunity to learn from others through teamwork and problem solving and get rid of my fear of public speaking while presenting my work to peers. I am mostly interested in internet/wireless/ network security based projects. I want to take advantage of the opportunity offered through this course by working on a project based on similar interest.

Threats

Sometimes my lack of practice and knowledge in programming and incompetence in public speaking are obstacles to my performance. Due to my less confidence and practice in programming, I also feel that I might not be selected for projects that I'm interested in.
